

THE ECOLOGY AND CONSERVATION OF UNGULATE MIGRATIONS IN THE GREATER YELLOWSTONE ECOSYSTEM

DR. ARTHUR MIDDLETON
ASSISTANT PROFESSOR, UC BERKELEY

Arthur Middleton is an assistant professor of wildlife management and policy at UC Berkeley. His earliest work with wildlife was as a falconer and raptor biologist. He later received graduate training in environmental management at Yale University, and in ecology at the University of Wyoming. Arthur's group at Berkeley studies the effects of environmental change on the behavioral, population, and community ecology of wide-ranging wildlife, with emphasis on the development of solutions to human-wildlife conflicts. Currently the group maintains active field programs in the Northern Rockies of the western US and in the Andean and Patagonian Steppe of Argentina.
