

# DATA SCIENCE / ECOLOGY / MICROSOFT

**Ken Collins manages a worldwide team of Data Scientists and Business Architects for Microsoft. He sees, every day, how organizations struggle to use data and analytics to transform how they work. He also sees the reality of what skills are required in a Data Scientist to see the patterns, gain insight, and communicate. Those skills have little to do with “R” and lots to do with how to think, and discipline.**

## **KEN COLLINS**

**WW DIRECTOR OF BUSINESS**

**ARCHITECTURE AND DATA**

**MONDAY**

**MAY 15, 2017**

**9:30 AM**

**CORD 3021**

The brief presentation will cover the skills Microsoft needs to help customers innovate and analyze. It will use a couple of real-world problems. The intent is to help students understand the diversity of roles available in companies like Microsoft that actually fit applied sciences better than computer science.

Duration – 30 minutes followed by Q&A and 1:1 conversations
