Fall 2017 Seminar Series

# TEMPORAL VARIATION IN TROPHIC CASCADES:

## Case Studies from an Island Ecosystem

**DR. JONAH PIOVIA-SCOTT**

The Pioviascott Lab, WSUV School of Biological Sciences, combines field ecology, laboratory experimentation, and statistical modelling to study the effect of environmental change on ecological communities. The Lab works on a diverse array of organisms, including amphibians, reptiles, terrestrial and aquatic insects, plants, and fungal pathogens. Current research is focused in two areas: food webs at the aquatic-terrestrial interface and disease ecology.
